

AC52048: ETL Project

Assignment: Sun Model

Submitted by: Reema Dutta (2628084)

Measures:

I have kept

- server status code,
- time taken, &
- total requests

as measures since these all are numbers. And all these measures are being cut by all dimensions which I have defined.

Here, server status code includes values such as 200, 404 (Page not found errors) etc.

Dimensions:

1. Date- a hierarchal dimension with year, quarter, month, week, day & hour
2. Client- has IP as an attribute & country & city in a hierarchy
here, **c-ip** will be used to extract the postcode & find the city & country.
3. Request- has uri, file type, OS & browser as attributes
here, **cs(User-Agent)** will be used to extract OS & browser details, &
from **cs-uri-query**, we will extract the file type.
